PROFILE

.NET backend developer with 3+ years building and running C# and SQL Server applications in production. I own the design of REST APIs with ASP.NET Core Web API following Clean Architecture, dependency injection and OpenAPI contracts, secured with OAuth 2.0 / OpenID Connect, Microsoft Entra ID and MFA. Performance over millions of records (30+ s down to under 1 s), asynchronous integrations with queues and idempotency, xUnit testing and continuous delivery to Azure through Azure DevOps and GitHub Actions pipelines.

PROFESSIONAL EXPERIENCE

Independent .NET Backend Developer · Own products — June 2026 - Present · Oviedo / remote

- Murmur · Meeting transcription (open source, github.com/diegoesp10/Transcriptor-Back): .NET 10 backend (Clean Architecture): transcription and summaries with Whisper and Ollama running locally; persistent SQL Server queue, background workers, retries and real-time progress; OpenAPI-documented API.
- Lucía Espina Hair Salon (live in production, luciapeluqueriaecologica.com/en): website and business management (appointments, clients, payments) with ASP.NET Core 10, SQL Server and Azure App Service / Azure SQL; admin with MFA and revocable sessions; CI/CD with GitHub Actions.
- End-to-end owner of both products: architecture, data model, API, security, Azure infrastructure and production maintenance.
- Authentication and authorisation with ASP.NET Core Identity, OAuth 2.0 / OpenID Connect, MFA (TOTP) and revocable sessions; role policies and admin hardening.
- CI/CD pipelines with GitHub Actions: build, tests, analysis and automated deployment to Azure App Service and Azure SQL with EF Core migrations.

Stack: C# · .NET 10 · ASP.NET Core · EF Core · SQL Server · Azure App Service · Azure SQL · GitHub Actions · Docker · Whisper · Ollama

Backend Developer (.NET) · Wembley Studios — October 2025 - May 2026 · Fully remote

- Owned the design and implementation of REST APIs with ASP.NET Core Web API (.NET 8) following Clean Architecture and dependency injection; validation, business rules and versioning while preserving existing contracts in production.
- API documentation and contracts with OpenAPI / Swagger (native .NET OpenAPI generation), consumed by frontend teams and third parties.
- Redesigned data access with EF Core and LINQ: asynchronous queries, DTO projections, pagination and indexing; eliminated N+1 queries and cut response times from 30+ s to under 1 s over millions of records.
- Integrated third-party APIs through message queues, background processing, retries with backoff and idempotency, keeping data consistent through failures and timeouts.
- API security: OAuth 2.0 / OpenID Connect authentication with Microsoft Entra ID (JWT bearer), role- and policy-based authorisation.
- Quality and delivery: unit and integration tests with xUnit, code review via pull requests, Azure DevOps CI/CD pipelines (YAML) deploying to QA and production, production incident diagnosis and resolution.
- R&D on an AI agent integrated with Azure DevOps to automate development-lifecycle tasks.

Stack: C# · .NET 8 · ASP.NET Core Web API · Clean Architecture · EF Core · LINQ · SQL Server · OpenAPI / Swagger · OAuth 2.0 · Entra ID · xUnit · Azure · Azure DevOps · Git · Scrum

Software / ERP Developer · Adico — April 2023 - September 2025 · Oviedo, on-site

- Developed and rolled out the Solmicro Expertis ERP with C#, VB.NET and .NET Framework 4.8: business rules and automation for invoicing, inventory and reporting over millions of records for multiple clients.
- Optimised T-SQL, stored procedures, indexes and execution plans, reducing process and report times from tens of seconds to under one second.
- Integrated and synchronised external systems; gathered and validated requirements with clients, provided production support and built Crystal Reports reports.

Stack: C# · .NET Framework 4.8 · VB.NET · SQL Server / T-SQL · MySQL · Solmicro Expertis · Crystal Reports · Git

TECHNICAL SKILLS

Languages and frameworks: C# · .NET 8 / 10 · .NET Framework 4.8 · ASP.NET Core Web API · EF Core · LINQ · ASP.NET Core Identity
Architecture: Clean Architecture · Layered architecture · SOLID · Dependency injection · OpenAPI / Swagger · API versioning
Data and performance: SQL Server · T-SQL · Stored procedures · Indexes and execution plans · EF Core migrations · MySQL
Integrations and processing: REST APIs · Message queues and background jobs · Retries and idempotency · Third-party APIs · Asynchronous processing
Security: OAuth 2.0 · OpenID Connect · JWT · Microsoft Entra ID · MFA / TOTP · Role- and policy-based authorisation
Quality and testing: xUnit · Unit and integration testing · Code review · Production debugging and diagnosis
Cloud and DevOps: Azure (App Service, Azure SQL) · Azure DevOps · GitHub Actions · CI/CD pipelines (YAML) · Docker · IIS · Linux
Tools and methods: Git · GitHub · Azure Repos · Scrum / Agile · Crystal Reports · Solmicro Expertis · React / TypeScript (supporting)

EDUCATION AND LANGUAGES

Higher Vocational Diploma in Web Application Development (DAW, EQF level 5) · IES Monte Naranco · Oviedo · 2020 - 2023 · Spanish: native · English: professional working proficiency
